WELCOME

Welcome to MICCAI 2016 in Athens!

It is a privilege and honour for the organisation team to be your host this year at the Intercontinental Athenaeum Hotel in Athens. MICCAI is an outstanding platform to promote, foster and disseminate our research in a very collegial and friendly atmosphere, which we all enjoy so much. We very much hope that we will provide you yet another memorable MICCAI this year as well.

MICCAI 2016 received 756 submissions, from which we selected 228 papers for publication. We are very grateful to our Program Committee members and our reviewers who are at the core of the stringent selection process. We appreciate the amount of work everyone is putting into this review process and are very excited by our scientific program and we do hope that you will be too!

We are hugely grateful of the financial support we received from our sponsors. It made a critical difference to the overall quality of the meeting, especially this year where we had to make some drastic changes of destination a few months before the conference.

We would also like to thank the MICCAI Society for its support and guidance along the years. Our Society is playing a key role towards the growth of our research field and we all need to be supportive of its activities.

We are delighted to host you in this great historical city. Our journey to Athens has been somehow quite challenging although could have been far more complex without the continuous support of Dekon, who did an amazing job to relocate the conference from Istanbul to Athens in a very smooth and professional manner.

I wish you all a memorable scientific and social event.

Sebastien Ourselin

General Chair, MICCAI 2016

Dear MICCAI participant,

I wish you a very warm welcome to MICCAI 2016, in the beautiful city of Athens. To me, the MICCAI conference is always one of the highlights of the year. With its focused workshops and tutorials and excellent main meeting, it is the place to learn about the latest developments in our field, to discuss with colleagues, and to make and meet friends.

Perhaps we do not realize this everyday, but writing this word of welcome I do: we, as a MICCAI community, have the privilege to be working in a unique field of research. Conducting research in medical image computing and computer assisted interventions exposes us to the beauty of life and the complexity of disease. It challenges us to address fundamental problems with new theory and advanced technology, ranging from machine learning to medical robotics. It enables us to make impact, as this is a field with tremendous socioeconomic relevance; developments in our field affect our personal health and quality of life, and help us to address community and global health issues. I am really proud of the achievements that we as a community make in this field, and the particular important role the MICCAI conference and MICCAI society plays herein.

Of course, a meeting like MICCAI is impossible without the hard work of many individuals, who, mostly fully voluntarily, devote many hours to its success. It is the authors who bring the excellent science, it is the hard work of reviewers that enables the organizers to shape the programme and provide authors feedback, and it is the hard work of many members of the MICCAI Society in the background to support the local organization. I thank you all for your great efforts. Lastly and most importantly, I would like to take this opportunity to thank and compliment the MICCAI 2016 organization committee for their excellent work and dedication, especially in view of the challenging circumstance of having to relocate the meeting, to make this conference a great success. Thanks to you, for a full week, we can all enjoy, inspire and be inspired. I look forward to it!

Wiro Niessen

MICCAI Society President

SPECIAL AND SOCIAL EVENTS

MICCAI Student Board Academia & Industry Event

17 October 2016, 6:30 PM - 9:00 PM | Ypsilon 1-2-3 Meeting Room

The Academia & Industry event aims to allow students to answer their most pressing questions and interact directly with professionals from academia and industry. We will first have a panel discussion with top academics and industry representatives, followed by a networking session where students can talk one-on-one with the panelists and with additional invitees from different universities and companies. This is a great opportunity to learn more about different career paths and create connections!

MICCAI Women Networking Lunch

19 October 2016, 13:00 - 14:00 / Omega-Lamda Meeting Room

A Women in Medical Image Computing and Computer Aided Interventions luncheon was held at MICCAI 2016 to provide a platform to discuss gender-related issues in the field. Medical image analysis and Computer Aided Interventions have seen tremendous progress in scientific methodology and clinical applications in recent years. However, despite the rapid progress and the growth of the field, women continue to be an under-represented minority in the community, both in academia and in industry. Particularly, fewer women have senior roles in these communities compared to number of female students and junior researchers. In addition to discussions on the issue of under-representation, other goals of the luncheon were to allow researchers to network, to increase the visibility of senior female researchers who can serve as role models to students and junior researchers, and to identify concrete action items towards creating more inclusive work and meeting environments. The action items and the outcomes of the luncheon can be extended to other conferences and events of the biomedical imaging community at large. To monitor progress and maintain continuity, a similar event will be held next year at MICCAI 2017.

It will be brought to your mailboxes every morning during the conference by the online magazine Computer Vision News (published by RSIP Vision), with whom we have partnered to offer this novelty to the MICCAI community. All you will need to do is to check your mailbox every morning: you will find there the MICCAI Daily with its many sections: presentations, reviews, interviews, the picks of the day and many more: all of them will put an additional spotlight on MICCAI presenters and attendees. You can already read Computer Vision News and subscribe for free at <http://www.rsipvision.com/computer-vision-news/>. We look forward to the first MICCAI Daily, on October 18 in Athens!

GALA DINNER

The Nasioutzik Estate in Spata -a natural balcony to the Attica region, which releases the eye as far as the island of Evia, resembles a historical discovery more than a modern structure, just as if it was there... waiting to be discovered. The architecture takes the form of the Greek letter “Π”, which is the traditional shape of the Orthodox monasteries. It is situated on the top of a magical hill and looks towards the sun.

The sense of eternal mystery unravels upon entrance through giant wooden Byzantine doors which lead one directly into the temple dedicated to Saint George and Saint Demetrius. The unique magnificence of this structure, with its beauty and items of all ages, the work of art and Byzantine flavor...

*** Buses will depart from the hotel starting from 18:15 pm.**

Other interests are in image-guided therapy including computer-assisted technology development for multi-modal image display in the operating room. She is an active NIH investigator with multiple grants to support these efforts including the NCIGT, and a BRP, for enabling technologies, including robotics in prostate interventions. She is currently leading multiple clinical trials of mpMRI in prostate cancer, a leader in the international prostate working group and co-developer of the latest PIRADS v2 guidelines for prostate mpMRI, the MRgFUS devices for clinical MR-guided Focused Ultrasound Surgery. She has completed three trials in the use of MRgFUS for treatment of uterine fibroids and an on-going trial for treatment of Metastatic bone tumors for palliation of pain (BM004). Along with the NCIGT teams with Nathan McDannold, they continue research in this area as applied for MRgFUS for prostate cancer. She teaches and lectures widely on a regular basis and mentors and educates students from local Boston Institutions and beyond.

Multi-modal Image guided therapy: Novel personalized approaches in Oncology and beyond.

Multi-Modal Image guided therapy is a major focus of translational research and clinical practice worldwide. Imaging techniques, systems platforms, computer science and devices are rapidly being deployed in unconventional environments. The National center for image guided therapy (NCIGT) at our institution, is dedicated to improving patient care through novel and diverse ways of integrating imaging in all its forms directly into patient care. This lecture will provide a broad overview of the field of image-guided surgery, image guided radiation and interventions. Techniques to be discussed will include MRI, Computed CT, MRI, PET/CT, mass spectrometry and MR guided Focused Ultrasound surgery (MRgFUS). Illustrative examples will include Brain Lung, Gynecological and Prostate cancers. There are multiple applications in cancer detection, characterization, staging, therapy monitoring and assessment of treatment response.

Yoav Medan, PhD

Dr. Yoav Medan, a social and technology entrepreneur, is currently a visiting scientist and an adjunct lecturer at the Technion Faculties of Electrical Engineering and Biomedical Engineering. Joining the Technion Faculty in 2012 after a lengthy career in industry as a visiting associate professor in Biomedical Engineering, Dr. Medan also teaches a course on entrepreneurship to engineering undergraduates, as part of a new minor degree track in Entrepreneurship. In addition, Dr. Medan is a mentor to entrepreneurs in the medical device field through the Technion for Life Alumni program, the Technion BizTec and MassChallenge programs. Prior to that Dr. Medan served as Vice President, Chief Systems Architect (1999-2011) of InSightec Ltd, A medical device company pioneering non-invasive MR- Guided Focused Ultrasound surgery. From 1984 through 1998 Dr. Medan held various senior research and management positions at the IBM Haifa Research Laboratory. In 2013 Dr. Medan founded Haifa3D, a new non-profit open hub for 3D digital fabrication, hosted by the Tiltan College at the Haifa Port Campus. In 2014 he cofounded NiniSpeech Ltd., a startup company developing a real-time mobile biofeedback solution for people who stutter.

Curing with Sound – Image Guided Noninvasive Interventions Using Focused Ultrasound

While Ultrasound is best known as a diagnostic imaging modality, the talk will introduce Focused Ultrasound (FUS) - an emerging non-invasive medical intervention modality. The talk will broadly review the underlying science and technology principles, as well as the past, present and future research frontiers and clinical systems. The multiple mechanisms of FUS action and the unique role of imaging modalities in guiding and controlling the intervention in real-time will be demonstrated as part of current and future clinical applications. Such applications include tumor ablation, functional neurological disorders such as Parkinson and Essential Tremor, cardiovascular, targeted drug delivery and immunotherapy. As the unique clinical safety and efficacy profiles are being established, adoption is lagging due to a number of factors to be discussed. It is hoped that this talk will help gain public awareness and acceptance by all stakeholders.

Thursday, October 20 • 12:00-13:00

Kamil Ugurbil, PhD,

Kamil Ugurbil, Ph.D., is professor of Medicine, Neurosciences, and Radiology, and founding director of the Center for Magnetic Resonance Research (CMRR). He is one of the principal investigators of the Human Connectome Project (HCP), funded by US National Institutes of Health. Dr. Ugurbil is a pioneer in the arena of high-field MR development. He has extensive experience in leading major technology development efforts, including the world's first 7T scanner that provided preliminary data for the HCP grant. Within the CMRR, Dr. Ugurbil and his team have built a center with unique instrumentation and expertise that allows scientists to study Alzheimer's disease, schizophrenia, and other areas of brain science, as well as heart disease, cancer and metabolic disorders.

Advances in Diffusion Imaging in the Human Connectome Project

The NIH funded Human Connectome Project targeted scanning 1200 individuals using diffusion imaging and resting state fMRI, complemented with extensive anatomical, task dependent fMRI, and behavioral and genetic data. Significant effort was invested in the first two years of this project to introduce advances in data collection, primarily based on achieving highly accelerated data acquisition, leading to transformative new approaches to both diffusion imaging and resting state fMRI. Instrumental improvements also were critical, particularly impacting diffusion imaging. Combined gains have allowed collection of data with previously unavailable spatial resolution and q-space sampling both at 3 Tesla and 7Tesla, attaining new level of accuracy in connectivity measures. This lecture will describe these methodological and technical developments and the impact they have had on measures of brain connectivity, with particular focus on diffusion imaging.
